

Handover and instruction confirmation

Guarantee commencement notification

Crane model var.: _____ with the crane number: _____

was handed over on: (Datum) _____

in proper and faultless condition.

The warranty does not commence until the warranty commencement notification is sent to Penz crane GmbH and is a prerequisite for claiming warranty services.

The transferee of the above-mentioned customer confirms that he has been fully familiarized with the operation of the equipment and has fully understood the instruction. In the course of this, the operating manual of the crane and the grab, the service and maintenance guidelines and the service and maintenance book were handed over to the transferee.

This handover does not in any way replace any locally required crane operator training or crane operator's license and does not release the operator from his obligation to read the operating instructions carefully before commissioning.

For cranes with LS hydraulics, the signature of the installation company confirms that the main pressure of the crane on the LS pump has been set correctly.
